

INTEGRATED BIOMETRIC TURNSTILE **IBT**

The **INTEGRATED BIOMETRIC TURNSTILE (IBT)** consists of a secure site access portal utilising a full height turnstile and our **CLOCKFACE** verification face recognition system, housed within a single unit.

The system ensures that only a single operative can be verified and granted access at any one time. Once the operative enters the turnstile they are locked in place facing the verification screen. The **CLOCKFACE** verification software checks their identity and determines if they can proceed onto site. If the operative is denied access, an image of that person is taken automatically and stored on the system.

The system seamlessly integrates with all Aurora's existing software and other third party access control systems, to deliver a truly integrated solution.

IBTs can be delivered in either single or double configurations and can be networked together for larger sites.

Features and Benefits

- ☒ Secure site access allowing only site inducted personnel to enter.
- ☒ Eliminates tailgating providing accurate muster reports.
- ☒ Stops buddy punching and ghost workers to reduce costs.
- ☒ Ability to send Health & Safety messages via the screen, to individuals or groups of workers.
- ☒ Time & attendance logs can be fed into Timekeeper software for management reports and payroll.

Our uniquely designed **IBT** coupled with our face recognition technology ensures that entry and exit of all authorised staff is recorded every time and will not permit access to unauthorised individuals.
